

# WHEN WE TALK, YOUR PATIENTS HEAL.

## our TEAM

Chronic wounds are always complicated, with outcomes affected by a patient's preexisting conditions, age and lifestyle. That's why we believe in a multidisciplinary approach to healing, **working with you as an integral part of our team.**

They are your patients, and your experience and collaboration are invaluable to the process of healing their chronic wound.

The Advanced Wound Care Center at Beaver Dam Community Hospital uses the latest training in the most advanced techniques to aggressively manage your patient's wound. That means a treatment plan custom designed for each patient, with a focus on education and lifestyle changes to prevent future recurrence. Together, we can improve your patient's quality of life

Our core team is made up of wound care professionals with years of experience in diverse fields.

## our APPROACH

Our focus is on rapid healing using the latest technology and treatment methods to deliver specialized care to your patients. But more importantly, our goal is to treat patients with the dignity and compassion they deserve.

Every patient is different, and we respect those differences, always making sure to tailor our treatment to your patient's life and goals for recovery.

## HYPERBARIC OXYGEN THERAPY

When we use Hyperbaric Oxygen Therapy (HBOT) to treat your patient, they breathe 100% oxygen under pressure, allowing the oxygen to diffuse into blood plasma. Oxygen-rich plasma travels around blockages and obstructions, spreading up to three times farther into tissue. The pressurized environment also reduces swelling and discomfort, giving their body 10 times its normal supply of oxygen.

A proud member of the Healogics Network
